## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claimed invention is vague because the compound of formula I also can be represented by formula II. Also, formula IV also can represent the compound of formula II when side group is an F atom.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-37 are rejected under 35 U.S.C. 102(b)/(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 919536 or US 6,287,646.

The reference discloses that the compositions contain liquid crystal compounds having strong polarity, large dielectric anisotropy and excellent threshold voltage reducing effects and excellent miscibility in mixtures with conventional liquid crystal materials. The compositions provide expanded operating temperature range, improved miscibility, low temperature shelf life, low driving voltage and improved electro-optical characteristics, high multiplexing properties, improved flicker and crosstalk on the display screen, quick response and low parallax viewing angle, compared to prior art. Also, the reference further teaches liquid crystal composition suitable for use in IPS. The IPS display device has electric fields, which parallel to the liquid crystal layer. See lines 35-39 on page 22 of EP '536 or col. 34, lines 34-39 of US '646. Also see Claim 16. The Example 11 of the reference comprises the formulae I, II and III of the present invention. The compounds of formula IV are disclosed in Example 12. Other suitable compounds are all disclosed in the reference. The reference anticipates or inherently anticipates the claimed invention because the reference compositions have similar components as the present invention. If the reference not anticipated the claimed invention, it would have been obvious to those skilled in the art to utilize and optimize the components of the reference according to their need to improve the liquid crystal properties and display devices thereof.

***Response to Arguments***

4. Applicant's arguments with respect to claims 1-37 have been considered but are moot in view of the new ground(s) of rejection. The newly amended claims overcome the rejections over JP 11-158138 and JP 09-157654.
